

Write a java program to insert and retrieve the data from MSAccess database using Ucan access Driver.

```
=> import java.io.*;
import java.io.*;
public class Db {
    public static void main (String [] args)
    {
        try
        {
            Class.forName("net. ucanaccess. jdbc. Ucanaccess
                           Driver");

            Connection c = DriverManager.getConnection
                ("jdbc : ucanaccess : // F // Eclipse // Test // A1. access");
            Statement s = c.createStatement();
            System.out.println("Connection established");
            s.execute("Create table Mark (USN Varchar , Mark1
                    number , Mark2 number)");
            System.out.println("Table created");
            s.executeUpdate("insert into Mark values 'HAL18CS069',
                            100, 99");
            s.executeUpdate("insert into Mark values
                            'HAL18CS069' , 100 , 99");
            System.out.println("Inserted");
            ResultSet r = s.executeQuery("Select from Marks");
            System.out.println("The records in the table are:");
            while (r.next())
            {
                String usn = r.getString("USN");
                int mark1 = r.getInt("Mark1");
                int mark2 = r.getInt("Mark2");
            }
        }
    }
}
```

System.out.println(usr + " " + mark1 + "mark2");

}

Catch (Exception e)

{

System.out.println(e);

}

}

}
